                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for generating a variant protein for a host. The method involves comparing a parent protein sequence with natural protein sequences from a host, analyzing the amino acid strings of the parent sequence with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequences with corresponding amino acid strings of a natural protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. avariant antibody for a host as compared to a parent protein. The method enables the generation of variant protein. The method enables the generation of variant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Generating variant protein for host, by comparing parent protein sequenc with natural protein sequences from host, analyzing and substituting amino acids of parent sequences with corresponding amino acid string of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to modified (e.g. deimmunised) antibodies are less immunogenic compared to the modified anti-PSWA antibodies are less immunogenic compared to the unmodified anti-PSWA antibodies. The modified antibodies comprise complementarity determining regions (CDRs) from a non-human antibody (e.g. murine antibody J591,J415, J53 or E99), and framework sequences that are less immunogenic in humans (e.g. less antigenic than the murine frameworks in which a murine CDR naturally occurs). The modified antibodies bind with PMSA, preferably human PMSA, with high affinity and specificity. The anti-PMSA antibodies are useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, benign enlargement, prostatic cancer or testicular cancer, or solid tumours, soft tissue tumours or metastatic lesions, and its associated pain. The present sequence represents a variable region from a murine antibody

The present invention describes a method (M1) for ablating or killing an aberrant prostate specific membrane antigen (PSMA)-expressing cell (e.g. an epidermal and a dermal cell). M1 comprises contacting the cell, or a vascular endothelial cell proximate to the cell, with an antibody (or its attigen-binding fragment), which binds specifically to the extracellular domain of PSWA in an amount sufficient to ablate or kill the cell. The antibodies have antiporatelic, antiarthritic, dermatological, cytostatic, antiinflammatory and antiallergic activities, and can be used in vaccines. M1 is useful for treating a skin disorder in a subject, by administering to the subject, an amount of shandled which binds specifically to the extracellular domain of PSWA (the subject is a specifically to the extracellular domain of PSWA (the subject, by ammmal, preferably human and is having, or at risk of, a skin disorder). CC from psoriasis (preferably chronic stationary psoriasis, psoriasis (preferably chronic stationary psoriasis, psoriasis (von Zumbusch), annular pustular speciasis (von Zumbusch), annular pustular contains and prokeratosis, extoliative dermatities, pityriasis rubra planis, pityriasis rosacea, chthyosiform dermatosis, keratodermas, dermatosis, and prokeratosis, confictional dermatosis, keratodermas, dermatosis, and prokeratosis, an inflammatory or neoplastic disorder of the epidermis or dermis, conferently psoriasis. M1 is useful for treating a skin disorder such as an inflammatory or neoplastic disorder of the epidermal activity of PSWA-ceptressing cell, e.g. kidney, liver or brain cell, the exemplification of the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Monoclonal antibody ST40 light chain.

09-MAY-2001 (first entry)

```
The invention relates to the use of an anti-prostate specific membrane antigen (anti-PSNA) antibody or antigen-binding fragment for treating prostate cancer, monitoring a patient receiving an anti-PSNA antibody to treat prostate cancer, or selecting a patient for treatment with an anti-PSNA antibody. Also included are a method of treating prostate cancer in a subject, a method of monitoring a patient receiving an anti-PSNA antibody to treat prostate cancer and a method of selecting a patient for treatment with an anti-PSNA antibody Also disclosed are anti-PSNA antibody or antigen-binding fragment is a human antibody (or antigen-binding fragment), a modified antibody (or an antigen-binding fragment). The modified antibody, delimunized antibody, or antigen binding fragments.

The modified antibody or antigen-binding fragment has one or more CDRs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (complementarity determining region) from a mouse monoclonal antibody selected from 1931, v1813, or EB9. The anti-PSMA antibody or antigen shinding fragment is useful for treating prostate cancer, monitoring a patient receiving an anti-PSMA antibody to treat prostate cancer, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Belecting a patient for treatment with an anti-PSMA antibody. The present sequence is a mouse kabat subgroup consensus sequence for a light or heavy chain variable region used to compare to a sequence from one of the mouse monoclonal antibodies listed above.
                                                                                                                                     antibody; antibody engineering; antibody therapy; prostate tumor; cytostatic; prostate specific membrane antigen; PSMA; heavy chain variable region; light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antigen-binding fragment for treating prostate cancer or monitori
patient receiving an anti-PSMA antibody to treat prostate cancer.

The present sequence was used in a method for designing a mimetic which exhibits an activity associated with a parent molecule. Such mimetics may be smaller than the parent molecule and correspondingly easier and cheaper to make, since the active region of the parent molecule is mormally relatively small. The method is useful where the parent molecule is a binding domain or the hypervariable region of an antibody or other member of the immunoglobulin superfamily. It is useful when the parent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              molecule is an antibody and the mimetic a peptide, especially an antibody which binds CD4 and a peptide which binds CD4. The mimetics designed and produced are useful diagnostically to detect cells bearing CD4 on their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           surfaces or may be included in pharmaceuticals e.g. to treat conditions in which CD4 is implicated (e.g. HIV)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proteins.";
Proc. Natl. Acad. Sci. U.S.A. 100:538-543(2003).
-!- FUNCTION: B3 Ubiquitin ligase proteins mediate ubiquitination and subsequent proteasomal degradation from an E2 ubiquitin. B3 ubiquitin ligases accept ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NUCLEOTIDE SEQUENCE OF 641-1208, AND INTERACTION WITH DAZ.

TISSUE SPECIFICITY: Widely expressed at low level. Highly expressed in skeletal muscle, kidney and heart. Expressed at low level in placenta, lung, brain, liver and pancreas.
SIMILARITY: Contains 1 RING-type zinc finger.
CAUTION: Ref. 4 sequence differs from that shown due to a frameshift in position 1127.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=92020874; PubMed=1924306; Stewart R.U., Pesavento P.A., Woerpel D.N., Goldstein L.S.B.; Stewart R.U., Pesavento P.A., Woerpel D.N., Goldstein L.S.B.; Meditication and partial characterization of six members of the kinesin superfamily in Drosophila.; Proc. Natl. Acad. Sci. U.S.A. 88:8470-8474(1991).

-I-FUNCTION: Plus-end directed microtubule motor that may be used for anterograde axonal transport and could conceivably move cargoes in fly neurons different than those moved by kinesin heavy chain or other plus-end directed motors.

-I-TISSUE SPECIFICITY: Expressed primarily in the central nervous system and in a subset of the peripheral nervous system during
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               embryogenesis.
-!- SIMILARITY: Belongs to the kinesin-like protein family. Kinesin II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GENOME REANNOTATION.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                           + RNA(n+1).
SUBUNIT: In cyanobacteria the RNAP catalytic core is composed of 2 alpha, 1 beta, 1 beta, 1 gamma and 1 omega subunit. When a sigma factor is associated with the core the holoenzyme is formed, which can initiate transcription (By similarity).
SIMILARITY: Belongs to the RNA polymerase beta chain family.
CATALYTIC ACTIVITY: Nucleoside triphosphate + RNA(n) = diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
